1. Claims 1-19 are pending in this application.
2. Claims 1-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-19 are indefinite because the metes and bounds intended for the phrase "well suited" have not been defined in the claims. Alternatively, the phrase "well suited" is ambiguous and does not distinctly describe the material claimed. It is suggested that the phrase "well suited" be deleted for clarity of the claims and to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 9 recites the limitation "the bactericide" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Correction is required to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1654

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4, and 7 are rejected under 35 U.S.C. 102(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Hayakawa et al (US 6,294,151).

Hayakawa et al disclose a tablet containing urea and an inorganic compound containing silica. See the Abstract and column 1, lines 36-47 and lines 61-63. Hayakawa et al disclose using the tablet containing urea for diagnosing stomach infections with urease generating *Helicobacter pylori* bacteria. Note column 1, lines 1-25. Regarding the inorganic compound in the tablet, Hayakawa et al disclose silicic acid anhydride, silicic acid and silicate as examples of the inorganic compounds containing silica. Note column 1, lines 61-68 and column 2, lines 1-16. With respect to the use of an indicator that changes color, Hayakawa et al disclose examples of coloring agents additionally included in the tablet. See column 3, lines 12-14. In regards to the powder limitation in the instant claims, Hayakawa et al disclose "together with the compounds shown in Table 1, urea was ground and mixed in a mortar" and describes a urea and light anhydride silicic acid powder mixture. See column 4, lines 35-57 and column 9, lines 120-28. Further, with respect to the particle size; powder and anti-caking agent descriptions in the instant claims, Hayakawa et al disclose anti-sticking tablet formulations and disclose that "...urea and light anhydride silicic acid were mixed together, and the resulting mixture was ground by a grinder... to a final average particle diameter to 100 um or less". See column 9, lines 30-38 and the entire document. Thus, Hayakawa et al disclose the invention claimed except for using the phrase "anti-caking agent".

However, Hayakawa et al address the "anti-caking agent" limitation claimed in the disclosure of anti-sticking tablet formulations comprising urea and inorganic compounds that inherently perform the function of the instantly claimed "anti-caking agent". The Hayakawa et al reference discloses all the limitations claimed which anticipates or renders obvious the present invention.

Therefore, the burden of proof is on applicants to show patentably distinct differences between the urea tablet compositions in the Hayakawa et al disclosure and the urea material compositions claimed in the present invention.

4. Claims 5-6 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 10-19 are allowable over the prior art of record.
